# HOW TO CONSERVE WATER AT HOME

Place ice cubes on top of soil instead of discarding it.

Bathe your pets in an area of the lawn that needs water.

Use a bucket to clean your vehicle instead of a running hose.

Keep the tap tight. Always close properly after use.

Use a broom instead of a hose to clean verandahs, sidewalks and driveways.

Teach children to be water-wise. Show them how to read a meter and how to check for leaks.

Close the tap when brushing your teeth, shampooing, soaping, washing wares and shaving.

Use the two-sink method to wash wares; soak pots and pans to get rid of stuck food.

Check for leaks in your toilets, kitchen sinks, swimming pool, hose and sprinkler system.

Shorten your shower time. Shower in 5 minutes not 45.

Upgrade your bathroom faucets with water-efficient ones. High efficiency faucets use a maximum of 1.5 imperial gallons per minute.

Upgrade your toilet with water-efficient ones. High efficiency toilets are between 1.2 – 1.6 imperial gallons per flush.
