

Grenada National Adaptation Plan

What is the NAP?

- It's a guide that outlines how we can protect our communities from the impacts of climate change, such as storms and rising sea levels.
- It brings together insights from a diverse group of local experts, government departments, and community leaders to address our unique challenges.

Why is it important?

- The NAP helps us secure the necessary funding to strengthen our defenses against climate-related disasters.
- It ensures that everyone in Grenada, Carriacou and Petite Martinique understand the risks and is prepared to act, safeguarding our homes, livelihoods, and the natural beauty of our island.

Grenada National Adaptation Plan Process (2017-2021)

1 RESEARCHING CABINET MANDATE

A cabinet mandate was given in May 2015 for the NAP Process to begin. This meant outlining the objectives of the NAP and having workshops with various sectors; learning from similar regional initiatives; and revising the old Climate Policy. All of this was done in the name of research; figuring out important areas and how to approach them.

2 IDENTIFYING ISSUES

This included: pinpointing gaps; prioritizing issues in Grenada’s various sectors; and devising ways to mobilize resources and ongoing climate adaptation measures. This involved a fair bit of researching and planning between 2015 and 2017.

3 INTEGRATING

This involved learning about key stakeholders, gender sensitivity, and determining how best to integrate them into the NAP policies. Workshops and meetings were held to understand and prioritize the goals that needed to be met.

4 FINALIZING

After one last joint workshop for final edits, the final version of the NAP was drafted and submitted to the National Climate Change Committee. The document was refined and then approved for submission to Cabinet in October, 2017.

5 IMPLEMENTING AND ACCESSING FINANCE

Implementation of the NAP allowed increased access to climate finance and enhanced collaboration with the NGO community. It helped to enhance institutional framework and focus on adaptation programming. The new NAP will be in effect from 2023-2027, and requires a bold, proactive, result-based strategy to support effective implementation.
